

## Using Scale

A map shows part of the world smaller than it really is. The **scale** on a map compares distances on the map with distances on Earth.

Look at the map. Find the **scale**.

1. On the map the scale shows that 1 cm is equal to 1 \_\_\_\_\_.
2. If you lived in Southend City you would have to travel \_\_\_\_\_ km to visit a friend in Evergreen City.
3. \_\_\_\_\_ City is the farthest city from the Shoe Factory.
4. If a worker got hurt in the Car Factory they would have to travel \_\_\_\_\_ km to reach the Community Hospital.
5. Workers in Evergreen City travel \_\_\_\_\_ km to work at the Toy Factory.
6. Workers in Northend City travel \_\_\_\_\_ km to work at the Toy Factory.
